

Pippa

Pippa aged 10 likes to go to the park, ride her bike and play board games and with dolls.

She also likes to spend one to one time with adults and is beginning to develop her sense of empathy towards others.

She does talk to herself about what she has done during the day and is currently being treated for Attention Deficit Disorder. Pippa is sometimes described as being in her own world but responds well to routine and being told of any changes to her routine.

Due to the additional needs that Pippa has, she would benefit from foster carers with experience of caring for children with additional emotional and learning needs. Pippa requires a family who will be able to invest time to enable her to settle. Pippa has not been nurtured within the care of her birth family and it is important that she is afforded this in her long term placement.
